

Climate Ready Hamilton

*A network that supports residents and communities
as they organize to help themselves
and each other during extreme weather events.*

The entire community is affected when weather related emergencies strike. But communities can be more resilient against weather related emergencies when they have multiple, connected groups and individuals that are prepared.

Goals

Climate Ready Hamilton is a network designed to support its members, who in turn support the people they serve, to be prepared for weather-related emergencies. Members contribute their expertise toward a plan for neighbourhood response to extreme weather.

Vision

Climate Ready Hamilton coordinates and collaborates for the care of our most vulnerable neighbours in preparation for extreme weather emergencies. This network increases the capacity of residents to prepare for and adapt to extreme weather.
